Acknowledgements

This book is the result of encouragement, support & criticism from many individuals. I take this opportunity to express my sincere gratitude to my parents for their unwavering support, my teachers for their guidance and enlightenment, the reviewers and critics for their valuable feedback and everyone who contributed in making this work possible.

This is dedicated to all fathers on this Father's Day, June 21, 2026, and to the classmates of the Electronics & Instrumentation Engineering (EIE) 1997–2001 batch celebrating their 25th Reunion in the Smoky Mountains, Tennessee, USA. Wishing you all joy, cherished memories, and a wonderful celebration.

I would also like to thank my former students whose requests for the inclusion of newer microcontrollers as a foundational course in the curriculum inspired this effort.

I am especially grateful to the former Head of the Dept. Of EIE, Dr. M. Saravanan for his confidence in me, as well as for his support & approval of the course's inclusion in the SVEC16 regulations.

I also express my gratitude to the Governing body, Management, and the Dept of Electronics & communication Engineering (ECE) of Bapatla Engineering College for their support and for incorporating the course into the R24 regulations.

This book is just an attempt to present and demonstrate the fundamental concepts of Microprocessors & Microcontrollers using PIC18 devices which have traditionally been taught using 8086 and 8051 architectures.

The PIC18 family of devices is a product of Microchip Technology Inc. This book references and utilizes figures, information, and content from various Microchip Technology Inc's documents & datasheets, most notably those related to the PIC18F458, PIC18C801 and PIC18F8720, PIC18xxK40/PIC18xxK42 device families.

We, the authors, would like to express our sincere appreciation to Microchip technology Inc., and acknowledge their significant contribution through the development of these products and the extensive documentation that greatly assisted in the preparation of this book.
